Jayanagar 9th Block,Bengaluru-560078

EDUCATION

M. S. ENGINEERING COLLEGE
2019 - 2023

- BE(Computer Science and Engineering)

SKILLS

- C ,Python,C# **programming languages**
- **Strong problem solving**
- **solving Independently on real time problem**
- SQL **database languages**
- MySQL,SQL Server, PostgreSQL **Relational databases**
- HTML, CSS **web languages**
- Flask, .NET MVC **framework**
- **Git ,Logical Thinking,confidence**

ACHIEVEMENTS

- **ABACUS** STATE LEVEL **secured State level award.**
- **CHESS STATE LEVEL.**
- COLLEGE **PROJECT EXIBITION** secured **2nd PRIZE.**
- **RECOGNIZING HARISHREE FOR HER EXCEPTIONAL CONTRIBUTION TO THE WRAPPER DEVELOPMENT IN THE GENAI HORIZONTAL IS A GREAT WAY TO ACKNOWLEDGE HER HARD WORK AND DEDICATION. -RECEVIED SPARKLING STAR AWARD IN ACCENTURE**

LANGUAGES

KANNADA,ENGLISH, TELUGU,HINDI

PROFILE SUMMARY

Looking to grow my skills in a knowledgeable environment, to gain a deep understanding of core topics, and utilize my time effectively to contribute to innovative projects and company success.

WORK EXPERIENCE

Accenture, Bangalore AUG 2023 - PRESENT

Packaged App Development Associate

- I am working as a **"Backend Developer"**, to write Business logics for Clients.
- The current working **Generative AI (GenAI) project** customizes models for each client with services from Google, Azure, and AWS, including chat and image processing. It involves creating .NET endpoints, managing data in SQL, and processing results through the ML team, with results stored and queried by client authentication codes,now recently integrated with direct azure openai deployment where no interaction with ML Team directly connecting from .net to azure openAI.
- Developed and maintained **SQL queries, dynamic queries, joins, stored procedures, and functions** to retrieve and manipulate data efficiently.
- Had the opportunity to write **APIs, develop unit tests, and debug code** to identify and resolve errors.
- Supporting team members with challenges, collaborating with other teams for additional requirements, and maintaining a knowledgeable environment.

WORK FAVORITES:

- I optimized client onboarding testing by creating a Python script that reduced testing time from **40 to 7 minutes** for 10 services. The script dynamically handles IDs and provides success/failure counts for chat models**, earned appreciations for its efficiency.**
- **I hosted my data for free using 000Webhost.**
- To streamline the monthly costing process for numerous clients, **I optimized queries** in both SQL and PostgreSQL, **handled joins and dynamic queries, and created weekly triggering jobs.** I **developed Python script** to convert the data into required css format box formating accordingly for each engine and calculating totalcost accordingly to all engines sending **automated email delivery for each client matching on the client name in database,** significantly improving efficiency.
